

BoRit Asbestos NPL Site
Weekly Summary – week of 11/9/09

REMOVAL OPERATIONS UPDATE

Work completed week of 11/09/2009

1. Completed construction of the retaining wall (approximately 100 feet) on Wednesday.
2. Continued installation of concrete cable mats along the base of the headwall and retaining wall to prevent future storm damage; concrete will be poured over the mats and along the base of the walls to protect the walls from future storm damage.
3. Eight roll-off containers were picked up from the site (as of 11/12/09) and shipped to the landfill for disposal. To date, a total of 69 loads of ACM / organic debris have been shipped off-site for disposal . . . I don't have the last few containers weights yet.
4. One hundred ninety-five truckloads of clean fill were delivered to the site this week. As of 11/11/09, a total of 863 truckloads (approximately 12,945 cubic yards).
5. Due to lack of intrusive activities and recent precipitation, no particulate monitoring or stationary air sampling was performed this week.
6. Continued dust suppression activities as needed.

Work scheduled for week of 11/16/2009

1. Continue installation of the cable concrete mats along the streambed and banks of Rose Valley Creek.
2. Complete placement of clean fill (including final grading) on top ("behind") of the retaining wall.
3. Continue minor excavation of the streambed and collection of ACM debris from Rose Valley Creek and the reservoir bank/berms.
4. Continue to load roll-off containers with stockpile ACM waste for off-site disposal.
5. Continue dust suppression activities as needed.

REMEDIAL'S CORNER

1. This week CDM, EPA's Remedial contractor, was out on-site marking out soil sampling locations on the pile, the park, and around the reservoir.
2. Next week, surface water sampling and sediment sampling will be conducted in the reservoir along with the utility clearance.
3. The utility clearance will continue through the week of November 23 and drilling will begin the week of November 30th. Activities are expected to occur through the week of January 11.
4. The Site Management Plan is in the final stages for approval. Once finalized, it will be uploaded to the Removal Website (likely within the next week). The plan includes, but is not limited to, the Health & Safety Plan and Field Sampling Plan. The Field Sampling Plan describes the air, soil, waste, sediment, and water sampling that is planned for the Phase I investigation.
